Tithi is one of 5 Angas (parts) - fundamental Panchanga's elements which are used in choosing Muhurta for any action. If talking about Tithi, all knowledge is divided into following important topics: Tithi's rulers (Devatas); Grouping of Tithis by triads; Grouping Tithis by blindness;

VedicTime: Tithi

Tithi is the period in which the angular displacement of Moon from Sun increases by exactly 12° . There are fifteen tithi ($15 \times 12^\circ = 180^\circ$) in the waxing phase (śukla pakṣa) and fifteen tithi is the waning phase (kṛṣṇa pakṣa). The displacement angle = Longitude of Moon - longitude of sun.

Tithi Pravesha - Sanjay Rath

The Tithi is calculated with help of position of Sun and Moon in transit. $Tithi = (Moon\ Longitude - Sun\ Longitude) / 12$. If the calculated result is greater than 15, we have to subtract 15 from the result. The net result is Tithi.

How to calculate Panchang? - Hinduism Stack Exchange

Lunar calendars are based on the moon's rotation around the Earth. A tithi is the time taken for the longitudinal angle between the moon and the sun to increase by 12 degrees. A lunar month consists of 30 tithis, whose start time and duration vary.. The formula for calculating the tithi (and the paksha) requires that we know the longitudinal angle between the sun and the moon.

Panchang is the astrological daily calendar based on the Indian calendar. Daily panchang is one of the most popular reference manual for astrologers and people of the hindu community who rely on a day's planetary position to determine auspicious timing, festivals, vrats etc...

Panchang | Simple, Descriptive & Accurate

A tithi is a lunar day. There are 15 tithis in the waxing cycle of the moon (shukla paksha), and there are 15 tithis in the waning cycle of the Moon (Krishna paksha). The tithi is based on a relationship between the Sun and the Moon. The first tithi is 12 degrees of the Moon away from the Sun after the new Moon (Amavasya) or full Moon (Purnima).

Tithis - Freedom Vidya

The calculations are based entirely on the movements of the planets and stars at certain degree. Calculations are done by finding out the position of the Moon in a certain Nakshatra of a person's natal chart. Today Panchang or daily Panchang is used in order to calculate the tithi, var, yog, karan and Nakshatra of a particular day of the week.

Panchang Today - Astroyogi

These calculations depict how these movements and transitions are supposed to affect a person on a particular date and can be done to minimise the negative and maximise the positive effects. The Panchang is used to calculate tithi, vaar, yog, karan and nakshatra to find out Muhurat or an auspicious time to perform any important task.
